

Notes regarding the repeater
 1. The exact position of the repeater is to be determined.
 2. At the repeater position leave 2m spare on each CT167 cable.
 3. Each CT167 cable to be labelled with the tap-off line number.
 4. The repeater will need a mains supply and earth bond.

Notes regarding the TV point in the Ground Floor XXXXXXXXXXXX Area
 1. See drawing XXXXXXXXXXXX for the location of the wallplate.
 2. Since the route of the conduit serving this outlet is to be determined, this system plan makes provision for its connection at any of the three possible splitters in the vicinity. Connect to any one of the three splitters within the blue dotted line, and at the others terminate the unused outputs. The alternative possible connections to the outlet are shown as a red dotted line.

Note: all unused output sockets on the splitters and tap-off units must be fitted with a line terminator.

New XXXXXXXXXXXX 200X	
Television Distribution System: distribution network
